

Complications of worms are not just related to gut!

What starts as a harmless infection can quickly escalate to severe damages, leaving your pet vulnerable to serious health risks

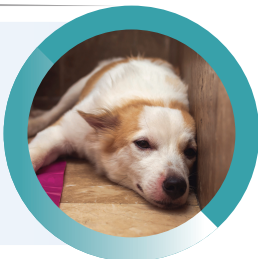

- 1. Nutritional Deficiencies :**
Worms steal the nutrients from pet's food, leading to weakness and poor growth

- 2. Anemia :**
Hookworms attach to intestine and suck blood, leading to significant blood loss.

- 3. Digestive Issues :**
Worms irritate intestinal lining, causing vomiting, diarrhea and bloating.

- 4. Constipation :**
A heavy worm burden can block the intestines, leading to constipation and severe discomfort.

- 5. Tissue Damage :**
Worms can cause tissue damage by directly feeding on or invading organs.
